Cadaqués, Costa Brava

Relevance:

Metal frame docks Unideck®

Timeline:

2015

Quality Control:

BMI ISO QA Manuel, CMFerrer

Project Delivery:

Design/ Build

Construcciones Metálicas Ferrer, has designed and built some metal frame docks Unideck® with different sizes: 12x2,1m and 8x2,1m. Also they have built some gangway to cross these pontoons and some gangways for existing pontoon in Cadaqués. These temporary pontoons could be found in the location during summer time.

The Unideck® system consists of structures made of aluminum, corrosion resistant, covered with decking and optionally bonded together by silent armed blocks.

The installation of these temporary pontoons has been carried out by the local company Més de Mar.
