

Passenger off-loading Les Sablettes, Toulon

Location:

Toulon, France

Relevance:

Passenger off-loading with Unifloat® docks

Client / Operator:

Private

Timeline:

2012

Quality Control:

BMI ISO QA Manuel

Project Delivery:

Design / Build

Specializing in the design, development and construction of heavy-duty floating platforms and dock systems to support vessel berthing and passenger off-loading, Bellingham Marine is able to provide cruise lines and small ports with feasible solutions to meet their unique berthing needs. In Bellingham Marine built in 2012 a passenger off-loading in Les Sablettes, at Lazaret bay, close to Mairie Council, in Toulon, using Unifloat® docks and piles as an anchoring system.

Bellingham Marine's experience in dock construction is unsurpassed. At locations where near shore moorage for cruise ships is not feasible, tender docks can provide the infrastructure needed for cruise lines to access small, local ports. Depending on the site conditions and size of tenders, docks can range from lightweight timber systems to concrete dock systems.
