

MARINA DI LOANO

Loano, Italy

RELEVANCE:
Modern concrete
pontoons megayacht
center

CLIENT /OPERATOR:
Unipol Group

TIMELINE:
2014

PROJECT DELIVERY:
Expansion

Marina di Loano wanted to open their facility up to super-yachts, so they reconfigured their marina., moving a portion of their transient slips to the other side of the basin, to make room for seven new slips, wh would be able to accommodate vessels up to 77 meters (252 feet).

In conjunction with Bellingham’s engineers ADAC Structures every pontoon and fixture was custom designed and built specifically for the conditions and the operational specification in the Loano Port. The docks are accented by a bespoke gangway and are dotted with bespoke, polished-steel service pedestals. Ample super-yacht power is provided in the new section along with a full menu of amenities, including a dedicated Wi-Fisystem for the marina. The pile-cap lighting is solar powered.

Marina di Loano offers an experience to appeal to people from all countries, not just Italians. The marina has been developed to attract people who love the sea and enjoy sports. In keeping with the “destination within a destination” theme, a spacious beach is part of the marina. The complex has a five-star boutique hotel, restaurants, an upscale sailing club, tennis courts and a golf course ten minutes away.
